Ingeniería informática

2021-2025

Microsoft launchX course

LaunchX LATAM for fullstack development

2022

Experience

Sistema CNG

Sep 2025-Present

Lead Fullstack Developer

As a project leader in sistema's cng development branch, me and my team built from the ground up two financial web applications, using my experience as a data engineer to design and implement data analytics using numpy-financial as the core library for financial calculations.

As a lead developer, I was involved in each tiny step of the project, the first mockups, designing the application architecture, assigning and reviewing issues in a sprint-based methodology, building the CI/CD pipelines, deploying the apps on AWS, designing a reliable data backup plan, and of course, code the web app.

Tata Consultancy Services

Apr 2025-Sep 2025

Fullstack Developer - Data engineer

Working with a multinational team I've been maintaining python automations while working under agile methodology, also providing support to the data science department writing and fixing existent sql queries used during the ETL process.

Teradata

Sep 2024-Mar 2025

Integration Engineer Intern

During six months I used Informatica Intelligent Cloud Service to give maintenance to current cloud data integration tasks across a wide range of Teradata's services, using a mix of python scripts and mapping features provided by ICCS.

ITRANS

Jan 2024-Jun 2024

Fullstack web developer

Working with Laravel php, Tailwind css and Alpine.js, I spent six months providing support to existing systems and developing new features.

Teamwork was a very essential in this workspace, I successfully followed and helped create the project dashboard using SCRUMBAN methodology

Activities and side projects

Online wedding invitation webapp

Fullstack web developer

Using a custom Nginx server, I deployed for a private client a modified version of dewanaki's online wedding invitation, the invitation was fully accesible on the web until after the wedding day.

Asanawave (<https://asanawave.com/>)

Apr 2024-Present

Project manager and fullstack developer

We provide a space for a private teachers to upload lessons and manage all of their learning materials, while keeping close communication with their students.

My main responsibilities as a developer are integrating newly developed components to the system, write tests for existing components, and managing nginx server for provide a seamless integration on cloud.
